DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, 15-29, and 46-50, drawn to a general method of updating files, classified in class 717, subclass 171+.
 - II. Claims 30-36, drawn to a general communications network, classified in class 709, subclass 217+.
 - III. Claims 1, 12-14, and 37-45, drawn to a general method for train simulation, classified in class 703, subclass 8.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case invention II can be used to practice another and materially different process, e.g. general communication between a locomotive and a remote station, in which the classification is different from that of invention I (class 709 vs. class 717).

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination describes a particular use of the data transferred, i.e. for operating a simulator and adjusting simulator parameters, and does not affect the actual updating of the data. Furthermore, the subject matter related to simulators as disclosed is classified separately from that of invention I (class 703 vs. class 717). The subcombination has separate utility such as a general simulator for training locomotive operators for efficient controlling purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification (classes 717, 709, and 703), restriction for examination purposes as indicated is proper.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
